pdf..txt..bak..hf error: no such file or directory A: This is a wild guess, but I'm thinking that the file you downloaded is actually a zip file, and there is a directory with a.z extension and all the files inside. Try unzipping the file and then extracting the files to a new directory. If that works, I'm afraid I don't have any other suggestions at this point, sorry. 1. Field of the Invention The present invention relates generally to a method for generating a code sequence for a subscriber unit of a digital mobile radio system. The invention also relates to a subscriber unit for a digital mobile radio system. 2. Description of the Related Art As is known, mobile radio systems, such as, for example, GSM (Global System for Mobile communication) systems, are designed in such a way that a mobile subscriber unit (MSU) of a digital mobile radio system is connected by radio to the core network of the digital mobile radio system. The radio connection between the MSU and the core network is provided by a radio network controller (RNC). When the MSU is moving from the radio coverage area of a base station of the mobile radio system to the radio coverage area of a second base station of the mobile radio system, this is referred to as a handover. Before the MSU of a digital mobile radio system can be switched from the radio coverage area of a first base station (BS1) to the radio coverage area of a second base station (BS2), it is necessary to perform certain procedures in order to prevent interference with the signals received and transmitted by the MSU. Such procedures are referred to as "handover". The aim of handover is to control the load of the first base station (BS1) and the second base station (BS2) in order to guarantee a required quality of service (QoS) for the MSU. The current handover procedures are known to a person skilled in the art. In the case of a GSM system, two different handover procedures are currently known, namely a hard handover and a soft handover. In a hard handover the MSU is moved from the first base station (BS1) to the second base station (BS2) without being disconnected from the first base station (BS1). In the case of a soft handover, the MSU is connected to both 82157476af
